

Project description

Who are we empathizing with

All medical related stakeholders who are involved in the process of health care requirement and provision.

What do they need to do

Collect complete health details of the user and also insurance details then provide medical facilities and health tips safety awareness

What do they see

App based on dashboard system analyse health report of user and their environment provide medical assistant depends on their condition

What do they hear

Their environment have more positive cases of virus or some disease they might scared this app have to give awareness and precautions and health assistant

What do they say

People believe doctor so direct doctor assistant using this app give medical assistant specially for their health report

Pains

During pandemic most of the people can't go to hospital can't get enough treatments for all the people because of uncontrollable havoc .since it was unexpected circumstances

Gains

There are apps which give treatment in online itself. But we added to as complete health report and more convince access to doctor also get medical assistant from home itself diagnosing their body in periodical way analysis their health condition in month wise and report the next time the same environment situation occur intimate before to protect them
